

David Rynn

Senior iOS Developer

Brooklyn, NY | 646.763.0060 | davidrynn@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Senior iOS Developer with 9 years of experience shipping reliable native mobile experiences used by millions across fintech, healthcare, and media platforms. Specialized in Swift, UIKit, SwiftUI, and asynchronous architecture, with hands-on experience diagnosing performance bottlenecks with Xcode Instruments, improving stability, and delivering secure API integrations. Product-minded engineer who owns work from architecture and implementation through testing, release preparation, documentation, and iteration, and who communicates iOS best practices across engineering teams. AI-forward mobile engineer who applies Generative AI and LLM tooling to improve development workflows, quality, and product outcomes.

Core Technical Skills

Swift, UIKit, SwiftUI, Structured Concurrency (async/await), Xcode Instruments, XCTest, MVVM-C, Combine, GraphQL, Apollo APIs, Stripe, RxSwift, Redux, Objective-C, SPM, CocoaPods, Bitrise (CI/CD), GitHub/GitLab/Bitbucket, Jira, Charles Proxy

iOS Reliability & Delivery: iOS architecture, performance profiling, debugging, stability improvement, asynchronous architecture, API integration, unit testing, release preparation, CI/CD, technical documentation, App Store delivery

AI & Agent Tooling: Generative AI, LLM-assisted development, Model Context Protocol (MCP), GitHub Copilot Skills, Claude Code, OpenHands, Apple FoundationModels, Apple Intelligence, Windsurf, Copilot, Cursor

AI Workflow Strengths: AI-assisted SDLC design, agentic workflow design, custom instruction/agent/skill authoring, prompt and context engineering for software delivery, developer enablement and AI best-practice rollout

Certifications: AWS Certified Cloud Practitioner; Introduction to Model Context Protocol (Anthropic)

Experience

Fieldlight Interactive — Independent iOS Product Engineer | 2026 – Present

- Built and released an independent iOS app (“One Clear Step”) from concept through App Store launch, owning product definition, UX flow, architecture, implementation, testing, release preparation, and iteration.
- Designed a focused workflow that helps users move from an unstructured brain dump to a single actionable next step, balancing emotional validation with low-friction task completion.
- Implemented the app using Swift/SwiftUI and Apple Intelligence/Foundation Models, exploring practical on-device AI patterns for user-facing productivity workflows.
- Used AI-assisted development tools to accelerate implementation, test edge cases, evaluate UX alternatives, and improve release readiness.

Chase — Senior iOS Engineer | Nov 2023 – Present

- Owned and iterated on user-facing payment flows serving 80M+ customers, modernizing UIKit systems with MVVM/Coordinator architecture.
- Refactored a networking layer, contributing to a 12% app-wide stability improvement.
- Resolved critical defects in payment flows, increasing conversion stability by 5% and implementing durable reliability improvements.

- Used Xcode Instruments to diagnose performance bottlenecks and presented iOS performance-profiling practices to Chase mobile engineers.
- Contributed to Chase's Swift Concurrency working group and delivered internal talks to help mobile teams adopt async/await patterns and safer concurrent architecture.
- Delivered secure API integrations and led onboarding workshops to accelerate new-engineer ramp-up.
- Led the global AI Ambassador Mobile Chapter, driving adoption of AI-assisted software development, MCP, agent frameworks, and AI coding tools to improve engineering quality and delivery across distributed teams. Sub-focus: Established mobile-focused AI best practices across global teams by creating custom instructions, agents, and reusable skills for iOS development, debugging, and test-workflow acceleration. Sub-focus: Partnered with Chase's broader AI4Tech community as mobile lead to align regional teams, share playbooks, and deliver learning decks for engineering org-wide AI education.

Maven Clinic — Senior iOS Engineer | Jul 2022 – Oct 2023

- Shipped a high-quality native SwiftUI debit-card feature integrated with Stripe, from concept through App Store release.
- Built subscription and payment workflows with SPM and MVVM/Coordinator architecture.
- Mentored junior developers and collaborated cross-functionally to improve the product and hiring process.

Capital One — iOS Engineer | Jun 2021 – Jun 2022

- Developed customer-facing activation and onboarding features with RxSwift, Combine, and Redux.
- Migrated legacy Objective-C to Swift, reducing crash rates and improving user experience.
- Created onboarding demos and technical documentation, cutting new-engineer ramp-up time by 30%.

Small Planet — iOS Engineer (Consultant) | Feb 2021 – Jun 2021

- Built data-scraping integrations for a retail rewards app. (Contract)

Prolific Interactive (acquired by WeWork) — iOS Engineer | Jan 2019 – May 2020

- At Prolific (Jan-Jul 2019): Shipped native iOS apps for clients in fintech, retail, and media using Swift, Objective-C, and RxSwift.
- At WeWork (Jul 2019-May 2020): Built onboarding and activation features with GraphQL and RIBS; owned internal CocoaPods and coding standards.

NYC Dept. of Information Tech & Telecom — Mobile Developer | Jan 2016 – Dec 2018

- Lead developer for Notify NYC, a user-facing emergency notification app with 25K+ active users.
- Built and maintained mobile notification delivery features to publish timely emergency alerts to city residents.
- Designed MVVM architecture and delivered iOS best-practice talks to the engineering team.

Prior career as Public Defender (30+ jury trials) — developed leadership, communication, and analytical skills.

Education

Flatiron School – iOS Programming (Immersive) | NYU – Java I & II | UCSB – B.A. Law & Society | Lewis & Clark Law School – J.D.

Speaking, Leadership & AI Projects

- AI Ambassador, Chase Bank — Led mobile AI chapter; ran AI hackathons; evaluated and piloted MCP, GitHub Copilot Skills, Claude Code, OpenHands, Copilot, Windsurf, and Cursor across the mobile engineering org to improve AI developer productivity.
- Speaker, Chase iOS Engineering (Internal) — delivered talks on Swift Concurrency adoption and async/await migration patterns; contributed to the iOS concurrency working group.
- Speaker, iOSoho NYC Meetup (2025) — presented on Apple FoundationModels/Apple Intelligence; showed practical on-device AI patterns and demoed an app that generated lightning talks from prompts.
- Built AI-assisted side projects spanning procedural terrain experiments in Unity, a DSA study app, and an in-progress game prototype to deepen hands-on Generative AI and LLM product integration skills.
- Created “One Clear Step” as both a custom GPT and an Apple Intelligence app concept focused on reducing decision paralysis through actionable next-step guidance.
- Speaker, iOSoho NYC Meetup (2021) — gave lightning talks on SwiftUI Charts and Regex in Swift.
